Ryohei Hara

Full-stack web developer with 11 years of experience. I have been a freelance web developer since 2012 and since 2019 I have started working in Berlin as a web developer with a residence permit from freelance.

When I was in high school in Japan, I had already learned and acquired programming with basic knowledge of hardware and software. At university, I had studied educational technology as a bachelor's and master's degree, so to speak, which uses information technology to explore the environment of "learning" - not only in school but also on the Internet and everywhere you learn - so that circumstances of education and learning can be improved.

In Japan, I had worked on websites and backend systems of companies in various fields such as gaming, immobility, automotive industry. In Germany, I work with different projects from Germany and Japan with Wordpress, Javascript or ReactJS. I belong to some freelance teams, one is in Japan and other is in Berlin. Projects come along irregularly, so I am looking for more projects to expand the experience and skills.

I feel comfortable and content living in Berlin. I would like to take different new challenges to develop from here.

Apr 2010 – Mrz 2012

Master of Engineering
Tokyo Institute of Technology

Apr 2006 – Mrz 2010

B.A in Educational Technology
Oita University
